

Phase 3 — the same picture, after the Safety Island

Same boxes and same colours as phase 2. **The Control stack and the Vehicle Interface move bodily to the island** — dashed red, from the ghost they leave behind. The island grows reduced versions of the other stacks (blue tag), the HPC gains an interface block, and one narrow link joins the two. Node-level detail is phase 4.

The island is not a monitor bolted on the side: it runs a *reduced Autware*. Its localization is one node, its planning is four bounded map-free ones — and its control stack is not a reimplement at all, it is Autware’s, relocated. Phase 4 opens what changed to node level.
